PROFILE

AI/ML & Data Engineer and Computer Science student specializing in building end-to-end machine learning pipelines for computer vision and fraud detection. Experienced with OCR + ELA techniques for transaction image analysis, scalable data processing using Apache Spark, Hadoop, and Kafka, and deploying production-ready ML systems on AWS with Docker and Kubernetes. Skilled in designing reliable data pipelines, validation workflows, and integrating ML models into modern React/TypeScript and Python applications.

EDUCATION

Bachelor of Science in Computer Science, 08/2023 – 06/2027 | Rawalpindi
National University of Computer and Emerging Sciences (NUCES-FAST)
Expected Graduation: May 2027 GPA: 3.0

EXPERIENCE

Cloudlem Pvt. Ltd., DevOps Intern 11/2025 – 03/2025 | remote

- Containerized AI/ML workloads using Docker and deployed scalable systems via Kubernetes.
- Built CI/CD pipelines (Jenkins, GitLab) to automate training, testing, and deployment of ML models.
- Implemented Infrastructure as Code (Terraform) and monitoring to ensure reliable, production-ready AI systems.

Graphail Islamabad, Software Engineer 08/2022 – 08/2023 | Islamabad

- Developed full-stack applications using React, TypeScript, Express.js, and Material-UI to deploy AI-powered solutions.
- Designed research-driven RESTful APIs for efficient integration of ML models with client applications.
- Implemented optimized database architectures using MongoDB and SQLite for scalable data handling.
- Delivered production-ready platforms for clients on Upwork with strong performance and reliability.

PROJECTS

Financial Document Fraud Detection System

- Built an AI-based fraud detection system using ELA and OCR (Tesseract, EasyOCR) to detect forged transaction images, achieving ~99% detection accuracy with seconds-level inference.
- Developed an automated text extraction and validation pipeline → improved fraud pattern detection and reduced manual verification effort.

Real-Time Face Detection Application

- Developed a real-time face detection app using Python, OpenCV, and HOG → achieved high accuracy with reduced false positives.
- Implemented optimized detection pipeline and GUI (PyQt) → improved performance and user experience.

Peer Advice Board

- Designed and developed a student support platform using Express.js and SQL → enabled anonymous discussions and improved peer engagement.
- Built responsive frontend and RESTful APIs → enhanced usability and ensured efficient data handling.

Process Migrator - Operating Systems Project

- Designed a distributed process migration system → enabled seamless transfer of running processes across nodes.
- Implemented state preservation and networking APIs → ensured uninterrupted execution during migration.

SKILLS

AI / Machine Learning & Data Python, scikit-learn, PyTorch, Pandas, NumPy	Computer Vision / Image Processing OCR, ELA, Digital Image Processing	Big Data & Data Engineering • Apache Spark (PySpark), Kafka, Hadoop	DevOps • Docker, Kubernetes, CI/CD Pipelines (GitLab Actions)
Databases • MongoDB, MySQL, PostgreSQL	Web & Full-Stack Development • React.js, Node.js, Express.js, RESTful APIs	Tools & IDEs • VS Code, Git / GitHub, Linux	

CERTIFICATIONS

- Data Engineer Python - DataCamp
- Modernizing Data Lakes and Data Warehouses with GoogleCloud
- Data Engineering in Python and SQL
- Machine Learning Specialization- DeepLearningAi
